THERAPEUTIC CATEGORY AND BIOLOGICAL ACTIVITY INDEX

THERAP. CATS.

THERAPEUTIC CATEGORY AND BIOLOGICAL ACTIVITY INDEX

This index is designed to serve as an additional entry point to the monographs of this edition for which a therapeutic category (THERAP CAT) has been given. It contains listings for discrete chemical entities. Plants and plant portions, *e.g.* seeds or leaves, although used medicinally, have generally been excluded. An attempt has been made to standardize the nomenclature used for index terms. Therefore, the heading under which a compound is listed may differ slightly from the therapeutic category found within the monograph.

Biological activities indicating mechanism of action have also been included as index headings. Whenever possible, cross references to appropriate therapeutic categories have been given for these listings. Cross references have also been provided for synonyms of preferred terms or, in some cases, for closely related entries. In addition, many therapeutic category headings have been subclassified according to chemical or pharmacological features.

Monographs are listed alphabetically by title under each heading. Selected derivatives and isomers of title compounds have been listed by generic or trivial name and are referenced to the appropriate monograph by number.

Therapeutic categories have been assigned to reflect the major indications listed in manufacturer's product information, reported in the clinical literature, or published by the USAN Council. Inclusion of a drug in this index does not imply efficacy or endorsement, nor does it imply that the compound is *presently* being marketed. Omission of a compound from a particular category does not imply that the substance is not in use or under investigation for that indication. Additional information on each entry can be found in the cited monograph. Reference to primary sources is encouraged.
